Pancreatic ribonuclease (EC 3.1.27.5) - reindeer (tentative sequence)
N;Alternate names: RNase 1; RNase A
C;Species: Rangifer tarandus (reindeer)
C;Date: 31-Dec-1991 #sequence_revision 31-Dec-1991 #text_change 09-Jul-2004
C;Accession: B91418; A00812
R;Ledijenaar-van den Berg, G; Beintema, J.J.
R;BES Lett. 56, 101-107, 1975
A;Rtle: The amino acid sequences of reindeer, moose and fallow deer pancreatic ribonucle
A;Reference number: A91418; MUD:76003215; PMID:1157925
A;Accession: B91418
A;Molecule type: protein
A;Residues: 1.124 <LEI>A;Cross references: UNIPROT:P00666
C;Superfamily: pancreatic ribonuclease
C;Superfamily: pancreatic ribonuclease
C;Gywords: hydrolase; nucleic acid digestion; pancreas

J. Biol. Chem. 275:3535-35344(2000).
-!- FUNCTION: Omega-conotoxins act at presynaptic membranes, they bind and block voltage-sensitive calcium channels (VSCC) (By similarity). This toxin blocks N-, P-, and Q-type calcium
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     SEQUENCE FROM N.A.

-!- FUNCTION! Omega-contoxins act at presynaptic membranes, they bind and block voltage-sensitive calcium channels (VSCC). This toxin blocks N-type calcium channels as well as types of high-threshold voltage-gated calcium channels resistant to both dihydropyridines
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             "Structure-activity relationships of omega-conotoxins MVIIA, MVIIC and 14 loop splice hybrids at N and P/Q-type calcium channels."; J. Mol. Biol. 289:1405-1421(1999).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Nielsen K.J., Adams D., Thomas L., Bond T., Alewood P.F., Craik D.J.,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        "Solution structure of omega-conotoxin MVIIC, a high affinity ligand of P-type calcium channels, using 1H NMR spectroscopy and complete tralaxation matrix analysis.";

SUBCELLUIAR LOCATION: Secreted.
TISSUE SPECIFICITY: Expressed by the venom duct.
SIMILARITY: Belongs to the conotoxin O-superfamily. Omega-type
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        MUTAGENESIS OF TYR-15.

--- SUBCELLULAR LOCATION: Secreted.
--- TISSUE SPECIFFICITY: Expressed by the venom gland.
--- SIMILARITY: Belongs to the scorpion calcine family.
--- Calcium channel inhibitor; Cleavage on pair of basic residues;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Length 66;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  3; Indels

-- Submitted (JUN-1996) to the EMBL/GenBank/DDBJ databases.

-- In SUBLIARITY BUTCH (STATE): Expressed almost uniformly in early embryos.

-- SIMILARITY: Belongs to the NOTCH family.

-- SIMILARITY: Contains 6 ANK repeats.

-- SIMILARITY: Contains 3 EGF-like comains.

-- SIMILARITY: Contains 3 Lin/Notch repeats.

SUBCELLULAR LOCATION: Type I membrane protein. Upon activation and 33 cleavage, it is released from the cell membrane and enters into the nucleus in conjunction with Su(H).
FTM: Upon binding its ligands such as Delta or Serrate, it is cleaved (S2 cleavage) in its extracellular domain, close to the transmembrane domain. S2 cleavage is probably mediated by Kuz. It is then cleaved (S3 cleavage) downstream of its transmembrane domain, releasing it from the cell membrane. S3 cleavage requires

"Novel neural

```
-1- FUNCTION: Omega-conotoxins act at presynaptic membranes, they bind and block voltage-sensitive calcium channels (VSCC).
-1- SUBCELLULAR LOCATION: Secreted.
-1- TISSUB SPECIFICITY: Expressed by the venom duct.
-1- SIMILARITY: Belongs to the conotoxin O-superfamily. Omega-type
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              calcium channel antagonists. A new fold in the scorpion toxin family, associated with an activity
on a ryanodine-sensitive calcium channel.";

Proteins 40:436-442(2000)

-I-FUNCTION: Pocently and reversibly modifies channel gating behavior
of the type I ryanodine receptor (RYR1) by inducing prominent
subconductance behavior. Binds a different site as ryanodine.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              SEQUENCE, SYNTHESIS, AND MASS SPECTROMETRY.
